

## Contents

Preface . . . . .	12
<b>1 Introducing Engineers to Relativity</b>	<b>15</b>
1.1 The special theory of relativity, briefly . . . . .	16
1.2 The formal spacetime metric, briefly . . . . .	21
1.3 The general theory of relativity, briefly . . . . .	23
1.4 Summary of this introduction to relativity . . . . .	29
<b>2 Special Relativity for Engineers</b>	<b>31</b>
2.1 The peculiar nature of light . . . . .	31
2.2 Mass, energy and momentum . . . . .	41
2.3 One way Doppler shift . . . . .	44
2.4 Two way Doppler shift . . . . .	46
2.5 Some relativistic Doppler calculations . . . . .	47
2.6 Summary . . . . .	49
<b>3 Linear acceleration and Relativity</b>	<b>50</b>
3.1 Space-proper-time diagrams . . . . .	50
3.2 Accelerated frames of reference . . . . .	51
3.3 Transformation of acceleration . . . . .	52
3.4 The effect of acceleration on time . . . . .	53
3.5 Desynchronization revisited . . . . .	58
3.6 Summary of Special Relativity . . . . .	60
<b>4 Static gravity as geometry</b>	<b>65</b>
4.1 Newtonian acceleration from rest . . . . .	66
4.2 Quasi-Newtonian acceleration . . . . .	67
4.3 Relativistic gravitational acceleration . . . . .	70
4.4 Opposing acceleration components . . . . .	74

4.5	Summary of static gravity . . . . .	75
<b>5</b>	<b>Gravity and Moving Objects</b>	<b>76</b>
5.1	Gravity and radial movement . . . . .	76
5.2	Gravity and transverse movement . . . . .	80
5.3	Radial and transverse velocities combined . . . . .	83
5.4	Newton's gravity and the speed of light . . . . .	86
5.5	Summary of relativistic acceleration . . . . .	87
<b>6</b>	<b>Orbital dynamics - an Introduction</b>	<b>88</b>
6.1	Newtonian orbits . . . . .	89
6.2	Kepler's laws for planetary motion . . . . .	91
6.3	Relativistic orbits . . . . .	93
6.3.1	Conservation of energy and angular momentum . . . . .	94
6.3.2	Effective potential of light . . . . .	99
<b>7</b>	<b>Orbital equations</b>	<b>102</b>
7.1	A quasi-Newtonian, 'poor man's orbit' . . . . .	106
7.2	The 'Speed' of Gravity . . . . .	108
<b>8</b>	<b>Some tests of general relativity</b>	<b>117</b>
8.1	The perihelion shift of Mercury . . . . .	117
8.2	The deflection of light by the Sun . . . . .	118
8.3	The Shapiro time delay of light . . . . .	119
8.3.1	The effect of gravitational time dilation . . . . .	120
8.3.2	The effect of the curvature of space . . . . .	120
8.3.3	The time delay of light . . . . .	120
8.4	Gravity Probe B . . . . .	123
8.4.1	Geodetic Effect . . . . .	123
8.4.2	Dragging of Inertial Frames . . . . .	123
8.5	The spacecraft . . . . .	124
<b>9</b>	<b>Tidal Gravity</b>	<b>125</b>
9.1	Newtonian tidal gravity . . . . .	125
9.2	Relativistic tidal gravity . . . . .	132
9.3	Tidal gravity near a black hole . . . . .	134

<b>10 Gravitational Waves</b>	<b>140</b>
10.1 Tidal gravity and gravitational waves . . . . .	140
10.2 Detection of gravitational waves . . . . .	144
10.2.1 Weber bars . . . . .	145
10.2.2 Laser interferometry . . . . .	146
10.2.3 Cosmic music . . . . .	148
10.2.4 What lies ahead . . . . .	149
10.3 The purpose of it all . . . . .	149
<b>11 Parametrized Post-Newtonian formalism</b>	<b>150</b>
11.1 Post-Newtonian approximation . . . . .	151
11.2 Parametrized Post-Newtonian approximation . . . . .	154
11.3 Some solar system tests . . . . .	158
11.4 The Brans-Dicke theory of gravity in brief . . . . .	160
11.5 So was Einstein really right? . . . . .	160
<b>12 Introduction to Cosmology</b>	<b>162</b>
12.1 Cosmic design . . . . .	162
12.2 The expanding universe . . . . .	164
12.3 The cosmologist's approach . . . . .	167
12.4 An engineering approach . . . . .	170
12.5 Cosmological units . . . . .	172
<b>13 The Einstein-de Sitter Universe</b>	<b>173</b>
13.1 Einstein-de Sitter spacetime . . . . .	173
13.2 Observable space . . . . .	175
13.3 Standard expansion model concepts . . . . .	176
13.4 Redshift . . . . .	178
13.5 The other 'Hubble quantities' . . . . .	180
13.6 Look-back time . . . . .	180
13.7 Cosmic microwave background radiation . . . . .	181
13.8 Summary . . . . .	182
<b>14 The Friedmann Equation</b>	<b>183</b>
14.1 A 'Newton cannon ball' . . . . .	183
14.2 The Friedmann equation . . . . .	184

14.3	The density parameter $\Omega$ . . . . .	184
14.4	Density accounting . . . . .	186
14.5	The stability of $\Omega = 1$ . . . . .	187
14.6	The energy of the vacuum . . . . .	188
14.7	Summary of Friedmann model . . . . .	190
<b>15</b>	<b>Inflation</b> . . . . .	<b>191</b>
15.1	Guth's insight . . . . .	191
15.2	The simplest model . . . . .	192
15.3	Is the expansion rate actually decreasing? . . . . .	197
<b>16</b>	<b>Measuring the shape of expansion</b> . . . . .	<b>202</b>
16.1	The observables . . . . .	202
16.2	What we expect to find . . . . .	203
16.3	The distance ladder . . . . .	207
16.3.1	Parallax . . . . .	208
16.3.2	Proper motion . . . . .	209
16.3.3	The 'standard candles' . . . . .	210
<b>A</b>	<b>The Twin Paradox</b> . . . . .	<b>214</b>
A.1	Hand-waving argument . . . . .	215
A.2	Relativistic argument . . . . .	215
A.3	Engineering argument . . . . .	216
A.4	Bizarre arguments . . . . .	217
<b>B</b>	<b>The Sagnac effect</b> . . . . .	<b>220</b>
B.1	The rotating loop . . . . .	220
B.2	The 'infinite' loop . . . . .	222
<b>C</b>	<b>Quasi-Newtonian acceleration</b> . . . . .	<b>223</b>
C.1	General discussion . . . . .	223
C.1.1	Acceleration and gravity . . . . .	224
C.1.2	Acceleration and transverse movement . . . . .	225
C.1.3	Acceleration and space curvature . . . . .	226
C.2	Issues of a more technical nature . . . . .	230
C.2.1	Acceleration caused by a constant force . . . . .	230

C.2.2	Gravitational acceleration with pure radial velocity . . .	231
C.2.3	Gravitational acceleration at the peri- or apoapsis . . .	232
C.2.4	Angular acceleration in an orbit . . . . .	232
C.2.5	Angular acceleration derived for the distant observer	233
C.3	Summary of Quasi-Newtonian acceleration . . . . .	235
<b>D</b>	<b>The Titius-Bode law</b>	<b>236</b>
		
	<b>Bibliography</b>	<b>241</b>
	Index . . . . .	243
